PROFILE

Full-stack developer with 2+ years of experience building scalable, user-centric web and mobile applications. My work blends modern JavaScript frameworks like React and Node.js with cloud-ready architectures to deliver performance, reliability, and clean execution. I enjoy understanding problems deeply — breaking them down, optimizing edge cases, and building solutions that are both elegant and practical. Whether it's crafting intuitive UI flows or shaping efficient backend systems, I focus on impact and long-term maintainability. Outside of development, I stay curious: exploring emerging technologies, contributing to open-source, and engaging with the developer community to grow and help others grow.

PROJECTS

ICET - Completed

A professional conference website for International Conference on Emerging Technologies (ICET 2025), featuring paper submissions, speaker details, and event schedules, with a focus on accessibility and seamless navigation for global participants.

Operation Codebreaker - Completed

A high-intensity competitive coding event platform themed around preventing a nuclear missile launch, developed for TechXtreme'25 at Gandhinagar University.

Mystic6174 - Completed

A cybersecurity-focused Capture The Flag (CTF) game designed to test participants' hacking instincts and puzzle-solving skills for TechXtreme'24 at Gandhinagar University.

Bolibazaar - Ongoing

A comprehensive dual-platform marketplace combining traditional e-commerce shopping with live auction functionality.

Sunshine - Completed

A full-stack e-commerce platform built with modern technologies, featuring both web application and a separately developed mobile app. Link : [Sunshine Website](#)

HRMS - Ongoing

A full-stack web application designed for Gandhinagar University to streamline HR operations, including employee management, attendance tracking, and administrative workflows. Built with a scalable architecture and secure authentication to improve organizational efficiency.
